NATIONAL SURVEY FINDINGS: HOME FIRE RISK

The top causes of fires according to The Hartford survey are **electrical (26%)**, **cooking/their stove (25%)** or a **candle (12%)**¹

Charging a phone overnight is considered moderate risk; yet charging a phone overnight on your bed, leaving your kitchen with the stove on, or leaving a room with a candle burning are considered high risk.

86%

of Americans in the past year have charged a device overnight; **34%** have charged a device in their bed overnight¹

58%

of Americans in the past year have left their kitchen with something cooking on the stove¹

37%

of Americans in the past year have left a room with a candle lit¹

ACCORDING TO THE HARTFORD'S CLAIMS DATA³

MOST COMMON OCCURRENCES OF HOME FIRES

July 5

Most fire claims reported the day after Independence Day

Summer

Lightning fires

Christmas Eve

Cooking fires

In the two weeks after Christmas

Electrical fires

COMMON CAUSES OF HOME FIRES - BY REGION

OUR ANNIVERSARY AND MULTI-YEAR COMMITMENT

2017 - Marks the **70th anniversary** of The Hartford's Junior Fire Marshal® (JFM) program

110 million+ children - Have learned about fire prevention and safety, been deputized as Junior Fire Marshals, and saved countless lives, since 1947

\$2 million - Will be donated by The Hartford to local public school districts and fire departments in the top 100 cities with the highest home fire risk, from 2017 to the end of 2019

1.5 million kids (K-3) - Will receive our JFM educational materials in the top 100 U.S. cities, become Junior Fire Marshals, and go from everyday kids to everyday heroes

Students in select cities - Will experience **The Hartford Fire Safety House**, a mobile exhibit using state-of-the-art technology to immerse students in fire safety demonstrations

NAME THE FAMOUS FACES

Many famous people have been avid supporters and fans of our Junior Fire Marshal program. See how many you can identify by taking this [fun quiz](#).

Prepare. Protect. Prevail. With The Hartford.®

¹ The Hartford conducted a national online survey among a representative sample of 1,153 U.S. adults, age 18 and over, between February 24 and February 27, 2017. Margin of error is +/-2.9 percent at the 95% confidence level.

² The Hartford Home Fire Index is based on a study of the largest U.S. cities with a minimum of 80,000 housing units as reported by the 2010 U.S. Census. The Hartford calculated a rate of residential fires using number of residential structure fires from the 2014 National Fire with Reporting System (NFIRS) data, dividing by 2010 U.S. Census housing units. The Hartford also conducted a survey on fire safety and prevention behaviors among the general population in late 2016 and in early 2017. Survey respondents (approximately 100 per city) were given a score based on adoption of fire safety best practices. Standardized fire rates and survey scores were averaged to produce a composite score for each city.

³ Based on The Hartford's claims data from 2010-2016 at the time the claim was reported.
